Stakeholder Survey Summary
State Information
Printed September 2020

Survey Respondents

The Division of Behavioral Health (DBH) recognizes the need for strong community collaboration at the local level between agencies accredited with the DBH and their local referral sources seeking services for clients. Accredited agencies are asked to share a stakeholder survey with local referral sources such as schools, healthcare providers, and other entities of their choosing. The Stakeholder Survey is intended to create a dialogue between referral sources and accredited agencies to encourage collaboration to best meet the needs of clients.

Impact of SUD Treatment Services

Impact of treatment services is measured by surveying client perception of the quality of services received including the following: general satisfaction with services, access to services, quality and appropriateness of services, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning. Impact of treatment services is relevant because clients who feel empowered, motivated, have positive family relationships, and feel they have the ability to change may be more likely to have positive treatment outcomes.

The following information represents data from those clients who agreed or strongly agreed at time of successful discharge.

Utilization of High Cost Services for SUD Treatment Services

High cost services include the following: treatment for illness, injury, or surgery, emergency department visits, hospital admissions for mental health care, detoxification services, inpatient substance use disorder treatment services, or detention in a correctional facility. Participation in treatment services may help reduce the frequency of client utilization of high cost services. Data from FY17 and June through December FY18 are not reported due to a change in the reporting process. The following section includes data at admission into services and at successful discharge from services.

Impact of Outpatient Treatment Services

Impact of treatment services is measured by surveying client perception of the quality of services received including the following: general satisfaction with services, access to services, quality and appropriateness of services, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning. Impact of treatment services is relevant because clients who feel empowered, motivated, have positive family relationships, and feel they have the ability to change may be more likely to have positive treatment outcomes.

The following information represents data from those clients who agreed or strongly agreed at time of successful discharge.

Impact of Outpatient Treatment Services

Impact of treatment services is measured by surveying youth perception of the quality of services received including the following: general satisfaction with services, access to services, cultural sensitivity, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning. Impact of treatment services is relevant because youth who feel empowered, motivated, have positive family relationships, and feel they have the ability to change may be more likely to have positive treatment outcomes.

The following information represents data from those youth who agreed or strongly agreed at time of successful discharge.

Impact of PRTF Services

Impact of treatment services is measured by surveying youth perception of the quality of services received including the following: general satisfaction with services, access to services, cultural sensitivity, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning. Impact of treatment services is relevant because youth who feel empowered, motivated, have positive family relationships, and feel they have the ability to change are more likely to have positive treatment outcomes.

The following information represents data from those youth who agreed or strongly agreed at time of successful discharge.

Impact of CARE and IMPACT Services

Impact of treatment services is measured by surveying client perception of the quality of services received including the following: general satisfaction with services, access to services, quality and appropriateness of services, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning. Impact of treatment services is relevant because clients who feel empowered, motivated, have positive family relationships, and feel they have the ability to change may be more likely to have positive treatment outcomes.

The following information represents data from those clients who agreed or strongly agreed at the time of most recent update.

Impact of CYF Treatment Services

Impact of treatment services is measured by surveying youth perception of the quality of services received including the following: general satisfaction with services, access to services, cultural sensitivity, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning. Impact of treatment services is relevant because youth who feel empowered, motivated, have positive family relationships, and feel they have the ability to change may be more likely to have positive treatment outcomes.

The following information represents data from those youth who agreed or strongly agreed at the time of most recent update.

Impact of CBISA

Impact of treatment services is measured by surveying client perception of the quality of services received including the following: general satisfaction with services, access to services, quality and appropriateness of services, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning. Impact of treatment services is relevant because clients who feel empowered, motivated, have positive family relationships, and feel they have the ability to change may be more likely to have positive treatment outcomes.

The following information represents data from those clients who agreed or strongly agreed at the time of successful discharge.

Program Outcomes for MRT

MRT combines education, group and individual activities, and structured exercises to assist participants in addressing negative thought and behavior patterns. The program promotes higher moral reasoning by increasing self-image and promoting a productive identity. MRT includes 12 steps focusing on issues such as honesty, trust, acceptance, healing, relationships, and setting goals.

Impact of MRT

Impact of treatment services is measured by surveying client perception of the quality of services received including the following: general satisfaction with services, access to services, quality and appropriateness of services, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning. Impact of treatment services is relevant because clients who feel empowered, motivated, have positive family relationships, and feel they have the ability to change may be more likely to have positive treatment outcomes.

The following information represents data from those clients who agreed or strongly agreed at the time of successful discharge.

Targeted Services for Justice-Involved Youth
State Information
Printed September 2020

Fiscal Year 2020 (FY20) Program Activity

Targeted services for justice-involved youth were established in 2015 by Senate Bill 73. The Department of Social Services (DSS) worked with the Department of Corrections (DOC) and the Unified Judicial System (UJS) to identify and implement community-based treatment services for justice-involved and at-risk youth. Those services include Functional Family Therapy (FFT), Aggression Replacement Training (ART), and Moral Reconation Therapy (MRT). As of FY19, substance use disorder services are also available.

This state profile page reflects JJRI publicly funded clients in FY20, which runs from June 2019-May 2020.

Discharge Reasons for FFT

The Division of Behavioral Health (DBH) has set a benchmark of a 70% completion rate for FFT treatment services.

FFT Completion Rate	FY17	FY18	FY19	FY20	FY21
State Average	63%	68%	71%	58%	

The Program Outcome Tools and TOM information are derived from the Tri-Yearly Performance Evaluation (TYPE) report. This information is collected from the FFT therapist and entered into the Clinical Service System (CSS) on all families who complete FFT treatment services.

In School/Working	93%	96%	94%	96%	
No New Violations	76%	81%	82%	81%	

*No New Violations means the youth did not have a new offense and/or did not violate probation or aftercare during the course of FFT treatment services. Violations prior to admission into FFT treatment services do not count as new violations.

The TOM is completed by the therapist when the family is discharged from FFT treatment services. The TOM measures changes in behavior and functioning of the youth and family.

Impact of FFT

Impact of treatment services is measured by surveying youth perception of the quality of services received including the following: general satisfaction with services, access to services, cultural sensitivity, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning. Impact of treatment services is relevant because youth who feel empowered, motivated, have positive family relationships, and feel they have the ability to change may be more likely to have positive treatment outcomes.

The following information represents data from those youth who agreed or strongly agreed at the time of successful discharge.

ART Treatment Services

Program Outcomes for ART

ART is designed to alter behaviors of chronically aggressive youth by using guided group discussions to correct anti-social thinking. ART uses repetitive learning techniques to teach coping skills for managing anger and impulsiveness. ART includes three interventions; social skills, anger control, and moral reasoning.

Impact of ART

Impact of treatment services is measured by surveying parent/guardian perception of the quality of services received including the following: general satisfaction with services, access to services, cultural sensitivity, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning.

The following information represents data from those parents/guardians who agreed or strongly agreed at time of successful discharge.

Impact of MRT

Impact of treatment services is measured by surveying youth perception of the quality of services received including the following: general satisfaction with services, access to services, cultural sensitivity, outcome of services, and participation in treatment planning. Additionally, impacts are measured by improvements in social connectedness and overall functioning. Impact of treatment services is relevant because youth who feel empowered, motivated, have positive family relationships, and feel they have the ability to change may be more likely to have positive treatment outcomes.

The following information represents data from those youth who agreed or strongly agreed at the time of successful discharge.
