Foreword by Data and Outcome Team

The Division of Behavioral Health is dedicated to maintaining data quality and implementing best practices for data collection and monitoring to provide the public and stakeholders with meaningful information on publicly funded behavioral health treatment services in the state of South Dakota. We do this to be transparent with the public and stakeholders regarding areas of accomplishment as well as areas that may require further improvement. To this end, the profiles the Division of Behavioral Health publishes every year highlighting annual outcomes and treatment data have undergone significant updates. These updates reflect advances made in technology and data science to produce more meaningful comparisons on how behavioral health treatment services impact the client. Given these changes, we address what we anticipate will be some frequently asked questions below.

Can I compare this data to previous years?

The Division of Behavioral Health's Data and Outcomes team is currently refining the data extraction process to ensure its accuracy. In previous years, our data included clients who had assessments entered into STARS without formally being admitted into an SUD service. Many of these clients were categorized under outpatient services for reporting purposes. This year, however, we have adjusted our methodology to exclude clients who only received assessments and did not proceed to actual services.

Because of the changes and advancements in data processing, we do not recommend comparing data in this document to previous years' profiles. This recommendation is provided for many reasons; the chief among them is that data in this document are paired on a client basis, meaning that a client's admission data are paired up with their update and discharge data to create what is known as matched or paired datasets. Data were not matched previously, which means a direct comparison would produce inaccurate conclusions.

Does this mean that previous data are inaccurate?

Previous years' data are not inaccurate. Data analysis is a field that, like many areas, advances over time, especially as technology advances. Data presented in previous versions of the profiles were compiled and presented using valid and accurate data analysis techniques, and this new document also uses valid and accurate data analysis techniques. However, this document takes a step forward in using different data analysis techniques to align with best practices, and emerging and validated theories on data analysis and to utilize the leaps in technological advancements that have occurred within recent years.

What do these changes accomplish?

These changes allow us to make more definitive conclusions on the effects that behavioral health treatment services have on the clients receiving services. With paired data, we can directly analyze the changes in client responses from treatment admission to update to discharge.

Previously, such conclusions could not be definitively drawn, as the clients who were counted at admission, update, and discharge were not matched and therefore potentially different. Previous editions of profiles compared those who were admitted in a given contract year to those who provided updates or were successfully discharged from services that same year. Each of those groups may have included some of the same clients, but someone may admit in one fiscal year

and discharge in another. With the new method, we look at those who received services in a given fiscal year regardless of when they were admitted or discharged.

Does a client who receives services only receive one type of treatment service?

A client receives services as the trained professionals determine appropriate recommendations based on initial and ongoing assessment. A treatment episode (admission to services through discharge from services) for a client is as varied and unique to the client themselves. As an example, a client may initially be admitted to inpatient residential services, but as they progress in treatment, they may transition to outpatient services in their community. In such a case, a client's outcomes and data are counted once in both inpatient and outpatient services each, and once in the total services. This means that the data are unduplicated within service types as well as the overall data. If a client starts in outpatient, transitions to inpatient, and then transitions back into outpatient, that client is still only counted once in each service type. This is also why adult and youth services cannot be added to get the overall number of clients served. A client may turn 18 during their treatment episode and therefore, may be counted once in each adult and youth sections while being counted once in the overall number of clients served as well.

Why do I see “NaN” and “Infinity” in the percent change column?

“NaN” stands for “Not a Number.” NaN and Infinity both occur when the initial score or value at time of admission is 0. Because percent change is calculated by taking the difference divided by admission (multiplied by 100), if the initial score is 0, then this formula attempts to divide by 0, which results in either an error, NaN, when the difference is 0 also (0/0) or an infinite increase if the difference is anything but 0 (such as 1/0).

Why does the table show an increase in percent change, but the graph shows a decrease, or vice versa?

Generally, the tables show data pertaining to the average change on an individual basis. The graphs tend to show changes as percentages of the population of clients. This can sometimes result in what appears to be inconsistent data. It is possible for the average individual to experience an increase in symptoms while the majority of the client population had fewer symptoms. For example, if 3 clients reported their symptoms as a 2 at admission but a 0 at discharge and 1 client reported their symptoms as a 2 at admission but a 10 at discharge, 75% of clients (3/4) reported a decrease in symptoms but the average change for the average individual is an increase from 2 (8/4) at admission to 2.5 (10/4) at discharge, a 25% $((2.5-2)/2)$ increase in symptoms. Both ways of looking at the data are valid and convey different aspects of the clients served through public funding.

How do I find the state profile or an individual agency profile?

The Executive Summary, State Profile, and Agency Profiles can be found at:
<https://dss.sd.gov/behavioralhealth/reportsanddata.aspx>.

I am interested in similar data for other states or for the United States of America overall, where should I look?

The Division of Behavioral Health reports data in this document per the guidelines and categories as required by the U.S. Department of Health and Human Services, Substance Abuse and Mental Health Services Administration (SAMHSA). We report data in this document per the guidelines and categories SAMHSA identifies in various treatment databases, including the Treatment Episode Database Set (TEDS) and the Uniform Reporting System (URS). Because of this close working relationship, we recommend visiting SAMHSA's website if you

are looking for national behavioral health treatment information, data, and initiatives (<https://www.samhsa.gov/>).

Where can I find more information on state and national data related to behavioral health and substance use/misuse?

The Division of Behavioral Health encourages those who want to learn more to visit our epidemiology website located at <https://www.sdseow.org/>. The reports available from this website provide insight into how South Dakota trends historically against substance use and mental health as compared to our nation for both youth and adult.

Where can I find more information on DBH and publicly funded treatment services?

Information about the Division of Behavioral Health and publicly funded behavioral health services can be found on our newest website, <https://sdbehavioralhealth.gov> or the state of South Dakota's Department of Social Services website <https://dss.sd.gov/behavioralhealth/>, the Division of Behavioral Health can be contacted at 605.367.5236, or via email at DSSBH@state.sd.us.

Thank you for your interest in the data and outcomes of clients who receive publicly funded behavioral health treatment services in the state of South Dakota.

- Data and Outcomes Team, Department of Social Services, Division of Behavioral Health

Executive Summary

The Department of Social Services, Division of Behavioral Health is pleased to publish the Fiscal Year 2024 (FY24) State Profile Executive Summary. State Profiles began in Fiscal Year 2018 (FY18) as a joint commitment by the Division of Behavioral Health (referred to here forth as the Division) as well as publicly funded mental health and substance use disorder treatment agencies to accurately and consistently report the data and outcomes of publicly funded treatment services.

This executive summary introduces key statewide behavioral health outcomes as reported by South Dakota's publicly funded behavioral health providers. Some of the outcomes highlighted in this report include:

- Successful discharge rates for clients receiving substance use disorder treatment services
- Ability to control use and motivation to change current behaviors, such as substance use, for clients receiving substance use disorder services
- History of arrests and nights in a correctional facility for clients receiving substance use disorder treatment services
- Satisfaction and access to services for all behavioral health clients
- Employment rates for all adult behavioral health clients
- Levels of mental health and social well-being for clients receiving mental health services
- Reduction in emergency room and hospital visits for clients receiving mental health services
- Reductions in attempts to die by suicide for clients receiving mental health services

Additionally, the executive summary includes results from the annual stakeholder survey, which is provided to referral sources and other stakeholders for each Department of Social Services, Office of Licensure and Accreditation accredited behavioral health provider in the state.

The subsequent pages summarize statewide performance measures and outcomes for the following service areas:

- Adult and youth substance use disorder treatment services, including Intensive Methamphetamine Treatment (IMT) services and Pregnant Women and Women with Dependent Children (PWWDC) services
- Adult and youth mental health treatment services, including Comprehensive Assistance with Recovery and Empowerment (CARE), Individualized and Mobile Assertive Community Treatment (IMPACT), and Child or Youth and Family (CYF) services
- Emergency Services
- Systems of Care (SOC) services
- Targeted services for justice-involved adults and youth
- Telehealth and audio-only utilization

The Division is pleased to see the many positive outcomes experienced by individuals receiving publicly funded behavioral health treatment services, such as successful discharge rates that exceed the national averages in many areas, high ratings of client satisfaction, and improvements in key areas such as ability to control drug use and motivation to change current behaviors and reductions in hospitalizations and attempts to die by suicide. The Division looks forward to working with providers over the coming year to improve in other key areas, such as increasing successful discharge rates and improving access to services in some areas.

The full state and agency profiles are available to all stakeholders online at <https://dss.sd.gov/>. It is our hope these profiles will serve as a resource to anyone seeking information about the effectiveness of publicly funded behavioral health treatment services in South Dakota.

Data Collection Methodology

Since 2015, the Division of Behavioral Health has collaborated closely with members of the Data and Outcomes Work Group (DOWG) to identify the information found in the state profile and agency profiles. This work group, comprised of representatives from Community Mental Health Centers and substance use disorder agencies as well as the Division of Behavioral Health, meets on a regular basis to review and revise data and data collection methods for publicly funded behavioral health services in South Dakota.

Contracted providers collect data from client questionnaires. The surveyed population includes adults and youth receiving publicly funded behavioral health services as well as parents and guardians of youth receiving services. Publicly funded behavioral health services are funded through state general funds, block grant funding, and Medicaid funding.

Data in this Contract Year 2024 executive summary as well as the Contract Year 2024 state and agency profiles were collected between June 1st, 2023, and May 31st, 2024.

Data Collection Process

Stakeholder Survey

The Division of Behavioral Health (DBH) collects Stakeholder Survey data once a year for all accredited mental health and substance use disorder agencies. As part of the survey process, accredited agencies are asked to share the survey with stakeholders in their community. In addition, the DBH surveys the Department of Corrections (DOC), Unified Judicial System (UJS), and Child Protection Services (CPS).

Substance Use Disorder Services

Contracted agencies collect substance use disorder outcome data at admission and at successful discharge from services. Clients completing the surveys do have the option to skip or refuse to answer questions. The Division of Behavioral Health's Data and Outcomes team is currently refining the data extraction process to ensure its accuracy. In previous years, our data included clients who had assessments entered in the system without formally being admitted into an SUD service. Many of these clients were categorized under outpatient services for reporting purposes. This year, however, we have adjusted our methodology to exclude clients who only received assessments and did not proceed to actual services.

Mental Health Services

Contracted agencies collect mental health outcome data at admission, every six months, and at successful discharge from services. Outcomes for mental health clients are reported as per their most recent update, as it is common for those receiving mental health services to remain in services for an extended period. Clients completing the surveys do have the option to skip or refuse to answer questions. As a result, total data points collected may change between questions.

Additional Data Collection Tools

The Texas Christian University Criminal Thinking Scales (TCU) and Global Appraisal of Individual Needs-Short Screener (GAINS-SS) are secondary tools utilized to measure the impact of applicable treatment services.

Appendix A includes the data tables used to build this report.

Stakeholder Survey

The Division of Behavioral Health (DBH) collects Stakeholder Survey data once a year for all accredited mental health and substance use disorder providers. As part of the survey process, accredited providers are asked to share the survey with at least three stakeholders in their community. In addition, the DBH surveys the Department of Corrections, Unified Judicial System, and Child Protection Services regarding the accredited agencies.

Clients Discharged from Treatment

History of Arrest

Success Story

“

A gentleman in an aftercare group was thankful for the services he received for his severe methamphetamine substance use disorder. After completing Intensive Outpatient Treatment and Aftercare while receiving medication management services, he has remained abstinent for a year. He shared this is the longest time he has been sober since he was a teenager. He continues to stop by the agency to let them know he is doing great in his recovery.

”

[Page Intentionally Left Blank]

Intensive Methamphetamine Treatment Services

Intensive Methamphetamine Treatment Services

Success Story

“

Client started treatment in the Intensive Meth program. He has a family and worked hard at staying sober. He is currently on parole for a 25+ year sentence. Since completing the program, he worked for an accredited SUD agency as a meth mentor for over a year before obtaining a really good job working on the pipelines. He resigned from his mentor job only due to being out of town so much and not being able to meet the needs of the mentees. The client is a family man who has turned his life around by changing his way of thinking. He speaks regularly at the facility and chairs NA meetings when he is in SF. He is a good referral source for others seeking recovery as he has brought many to us and other treatment centers helping those obtain help. He has spoken at Parole Board meetings about his life and what he is doing to stay sober. He is a model client.

Success Story

“A client participated and completed both inpatient treatment and low-intensity residential services for approximately 4 ½ months. She entered the program for assistance with methamphetamine dependence. She was homeless and facing criminal charges due to her drug use. She is the mother of two children, both of whom had emotional and behavioral concerns and her husband was in prison. While attending the program, she received support for her addiction, childhood trauma, grief and loss, and survivor's guilt surrounding a home explosion that nearly took her and her children's lives and resulted in her uncle's death. Her children received support from the local community mental health center to address the emotional and behavioral needs of the children and the family as a whole. The client completed treatment and resolved her legal issues. She is currently successfully complying with her probation. She maintains employment and lives independently with her husband and children. She and her husband have continued in counseling services for on-going support.”

[Page Intentionally Left Blank]

Youth Substance Use Disorder Services

Youth Substance Use Disorder Services

Client Discharged from Treatment

Success Story

A teen came into services several years ago for help with her mental health and methamphetamine use. She began services and has been able to achieve long-term sobriety. When she began services, she was frequently having mental health crises and would relapse regularly. Soon she was able to maintain her sobriety. Since she has gained sobriety, she has graduated high school, no longer has mental health crises, and will be going to college this fall.

Adult Mental Health Services

Comprehensive Assistance for Recovery and Empowerment (CARE) Services

Success Story

“

A client referred themselves to services due to experiencing anxiety, depressive symptoms, and interpersonal/intrapersonal conflicts. A Cognitive Behavioral Therapy and Dialectical Behavior Therapy based model with integration of additional modalities were included within his treatment. Homework assignments to address his communication/emotional regulation and conflict resolution skills were provided, and he experienced a significant reduction in anxiety and depression. He gained an improved concept of self and re-established a healthy relationship with adult daughter. All of his treatment goals were accomplished, and he successfully terminated services.

Success Story

A 20-year-old female client came in for follow-up after an inpatient hospitalization due to suicidal ideation. Client had been in a "toxic" relationship before her hospitalization. During her initial call, the client indicated she left her relationship and was back home living with her mother. She had utilized her social supports of her family and friends since discharge and had a counseling appointment scheduled. Client indicated that her medications were going well and throughout her time in the program, she improved her negative thoughts. Client stated she relapsed recently with a multitude of substances and alcohol. Staff and client spoke about safe use of substances and the consequence of mixing substances with her current medication. Client indicated that she would speak with her counselor and go into her doctor. Later in the program, client showed signs of improvement indicating no thoughts of suicide, no use of substances, successful counseling appointments, moving in with some friends, and getting all medication side effects checked out as well as a wellness check with her doctor. Client mentioned towards the end of the program that she was thankful for getting a call every week and that the program reminded her of the coping skills she needed to continue and to think about things differently. Client left the program feeling supported by staff, her counselor, and her support system of family and friends.

[Page Intentionally Left Blank]

Youth Mental Health Services

Children or Youth and Family (CYF) Services

What Are Clients Saying About CYF Services?

Success Story

“

A client was referred for services upon discharge from inpatient treatment due to aggressive thoughts about harming others and themselves. The client had a significant trauma history and had no interest in school, making friends, or engaging in activities. Client often thought that therapy would not help, but eventually realized that letting their emotions out in session was helping and that they had someone on their side. Through therapy, the client was able to learn coping skills, process their trauma, and have hard conversations about what was going on without becoming aggressive or having negative thoughts. Towards the end of treatment, I got to watch them thrive at school, make friends, set long term goals, and know how to advocate for themselves. The client was able to be successfully discharged after meeting all of their treatment goals.

“Success Story”

A woman was given custody of her nephew after his biological mother was unable to care for him. Through parental education, learning tools to improve their daily routines and communication, and assistance in setting up her home with a bed and activities, the woman and her nephew have bonded and are doing well as a team. She has a stable job and is able to meet his needs confidently, which she is very proud of as this was her biggest concern when taking in a young child.

[Page Intentionally Left Blank]

Justice-Involved Treatment (Adults)

Evidence-Based SUD Treatment for Justice Involved Adults

Clients Discharged from Treatment

History of Arrest

Success Story

“A young lady came in on her own to get help on stopping her marijuana use. She had begun to struggle with her schooling and was concerned on whether she would be able to graduate because of the negative influence her marijuana use had on her education. She was able to attend Adolescent Moral Reconciliation Therapy (MRT) under the Juvenile Justice Reinvestment Initiative (JJRI) funding (as she could not afford it on her own). She graduated MRT almost two years ago, has been sober since and graduated high school this May!

Moral Reconciliation Therapy for Justice-Involved Adults

Clients Discharge from Treatment

History of Arrest

Success Story

One client came to Moral Reconciliation Therapy (MRT) with low self-esteem. The client was not working or trying to find a place to live. The provider connected the client with a homeless shelter. By the time the client graduated MRT, they had a job and a place to live and had increased their self-esteem.

General Satisfaction

Success Story

I worked with a family that was referred to the program after the youth was seen at the reception center. Mom was very concerned about the youth's substance use, decision making, and negative peer group. There was a lot of conflict in the home as well. Throughout the course of FFT the family gained insight into their patterns and learned communication and coping skills to better manage these patterns. They were able to better discuss and manage the challenges impacting their family. At discharge the family reported a significant improvement in their communication, decrease in family conflict, and feeling that they had a stronger relationship. Moreover, the youth had remained sober and the family did not report any new crises.

Evidence-Based MH Treatment for Justice-Involved and At-Risk Youth

Success Story

“

I had an adolescent successfully complete the ART program. She came into the program apprehensive about “anger management” but actively participated. As treatment progressed, she reported using the anger control chain outside of group on multiple occasions. She explained how her past experiences could have had a different outcome if she knew and applied the anger control steps. She attended every group and stated she enjoyed attending, not just because she was mandated to attend for probation. At the end of treatment, I received positive feedback from the adolescent’s parent who reported they witnessed a drastic change in how she handled her anger at home. She thanked me at the conclusion of ART and explained how she was looking forward to not making the same choices she did in the past when she becomes angry and upset.

”

Clients Discharged from Treatment

What Are Youth and Parents/Guardians Saying About EBP Services?

Success Story

“An adolescent was referred for MRT as a probation requirement due to defiant behaviors at home and sexting peers. Initially, the client was held back from passing steps, for not following rules/directions and for argumentative and oppositional behaviors. However, during goal setting steps, the client successfully gained employment and mended damaged relationships. Towards the latter half of group, the client became a positive peer and was always willing to help others and accepted positive criticism. During MRT, the client was successfully discharged from probation because of engaging in ongoing positive behaviors and positive change. The client successfully graduated from MRT, continues individual therapy, and is maintaining positive relationships with both family and peers.”

Success Story

"A mother of a child currently in counseling services came into the office after she recognized she had a dilemma. She had been drinking, learned her son was sick and needed be picked up from school. She recognized she was unable to safely drive him from school to home and reached out to us for help. At which point, our administrative staff assisted the mother in creating a method to help the family. Staff provided transportation to assist the mother. On the drive, the mother broke down and acknowledged that she had not known what to do, reached out to us knowing that we would not judge but would work together to help her and thanked the agency repeatedly for being the caring people we are. She mentioned that being a good person is about how we help others without expecting others to ever learn of it which is what the agency is to her."

Clients rate their satisfaction with treatment services.

History of Arrests *(Adult Substance Use)*

Percentage of clients reporting arrest in the past 30 days.

Homelessness *(Adult Mental Health)*

Clients report number of days homeless from the time of admission to the most recent six-month update.

Hospital Admissions *(Adult and Youth Mental Health)*

Clients report the number of times visiting a hospital for mental health care during the most recent six-month update.

Hours of Emergency Services Provided *(Crisis Services)*

Community Mental Health Centers report the number of emergency services for persons experiencing a mental health emergency or crisis, including those with co-occurring substance use disorders.

Improved Functioning *(Adult and Youth Mental Health)*

Clients are asked to rate their mental health and social wellbeing at the time of admission and at every six-month update.

Location Convenience *(Stakeholder Survey)*

The location of services are convenient for the client.

Missing School or Work Due to Substance Use *(Youth Substance Use)*

Youth report missing school or work due to their substance use at admission and discharge of services.

Motivation to Change Current Behaviors *(Adult and Youth Substance Use)*

Clients rate their motivation to change their current behaviors, such as substance use, at discharge.

Nights in a Correctional Facility *(Adult Substance Use)*

Clients report the number of nights spent in a correctional facility in the past thirty days.

Overall Improvement in Levels of Aggression *(Youth Mental Health)*

Youth receiving Aggressive Replacement Therapy complete the Aggression Questionnaire (AQ), which is designed to measure levels of aggression in youth.

Positive Outcomes *(Stakeholder Survey)*

Clients report satisfaction with the outcome of services.

Quality of Services *(Stakeholder Survey)*

This provider delivers quality services.

Satisfaction with Family Life *(Youth Mental Health)*

Families report satisfaction with their Family Life.

Service Availability *(Stakeholder Survey)*

Services are available at times that are convenient for clients.

Staff Competency *(Stakeholder Survey)*

Staff at this provider are competent to deliver treatment services.

Staff Training *(Stakeholder Survey)*

Staff at this provider are respectful and well trained.

Stakeholder Survey

The Division of Behavioral Health conducts an annual Stakeholder Survey of all behavioral health providers accredited by the South Dakota Department of Social Services. This survey supports continued collaboration and responsiveness to the needs of the clients and the community. Agency level results can be found at <https://dss.sd.gov/behavioralhealth/providersearch.aspx>

Total Emergency Services Provided *(Crisis Services)*

Community Mental Health Centers report the total number of emergency services contacts for persons experiencing a mental health emergency or crisis, including those with co-occurring substance use disorders.

Trouble as a Result of Substance Use *(Youth Substance Use)*

Youth report number of times getting into trouble due to substance use at admission and discharge of services.
